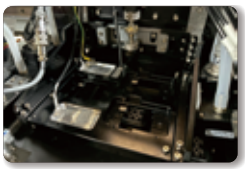
White Ink Recirculation System

The white ink is circulated at regular intervals during idle time to prevent pigment sedimentation that leads to malfunctions of the print head.

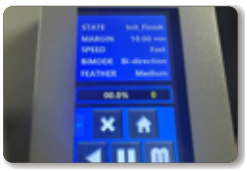
Anti-Static Brush

A large amount of static electricity will be generated when tearing off the A film. We have equipped anti-static brush to eliminate static electricity, which not only ensures the printing quality but also protects the nozzles.



Head Mounting Plate

We are committed to facilitating our customers. By using a high-precision processed print plate, there is no need to adjust the angle of the print heads.



Touch-Screen Panel

User friendly touch screen panel ensure smooth and convenient operation,enhancing user’ s experience and improving work efficiency.
